Press Release for Earth Day, April 22, 2009

SAVE MONEY, SAVE ENERGY, SAVE EARTH

EnergyHotwire.com the first fully comprehensive web site that teaches Americans how we can be energy independent with a well diversified team of experts has been re-designed for this coming Earth Day.

This **Earth Day, April 22**, the all new version of **EnergyHotwire.com** will be focusing our nation on step by step goals to help lower energy bills up to 60% or more and without sacrifice! **“We have the technology, we can be energy independent now,”** profess the people at **EHW**. A statement EnergyHotwire.com’s president has made since he was the energy advisor to Earth Day’s 20th anniversary Committee in New York City almost twenty years ago. He has been providing his expertise since 1982 when the first SL-18 energy saving bulb was made in Lynn, Massachusetts! Also the **EHW** team didn’t just join the “Going Green” movement, they have been consulting with corporations, politicians, organizations, celebrities, utility companies, and homeowners since the 1980s.

EnergyHotwire.com goes beyond tidbits of energy saving tips by teaching everyone topic by topic, basement to attic, hundreds of energy saving facts and trade secrets, most of which are never disclosed by utility or fuel supplier companies. **EHW** doesn’t teach Americans to lower their energy consumption by conserving. Instead, the site provides information on changing, fine-tuning, and updating equipment.

Along with learning how to lower energy bills on topics such as: Appliances, Cooking, Cooling, Heating, Insulation, Lighting, Shrubs, Solar, Water, Windows, and Doors, viewers can email **EHW** with specific energy related questions. To receive this valuable assistance, membership, which is FREE, is required. This free membership also qualifies the public for contests and allows submission on **EHW’s** Blog.

This site is an invaluable tool for anyone paying the electric, gas, oil, water bills, and those who are environmentally conscious. This site will not only help save energy and money, but our planet’s future for our children.
